

SPRING

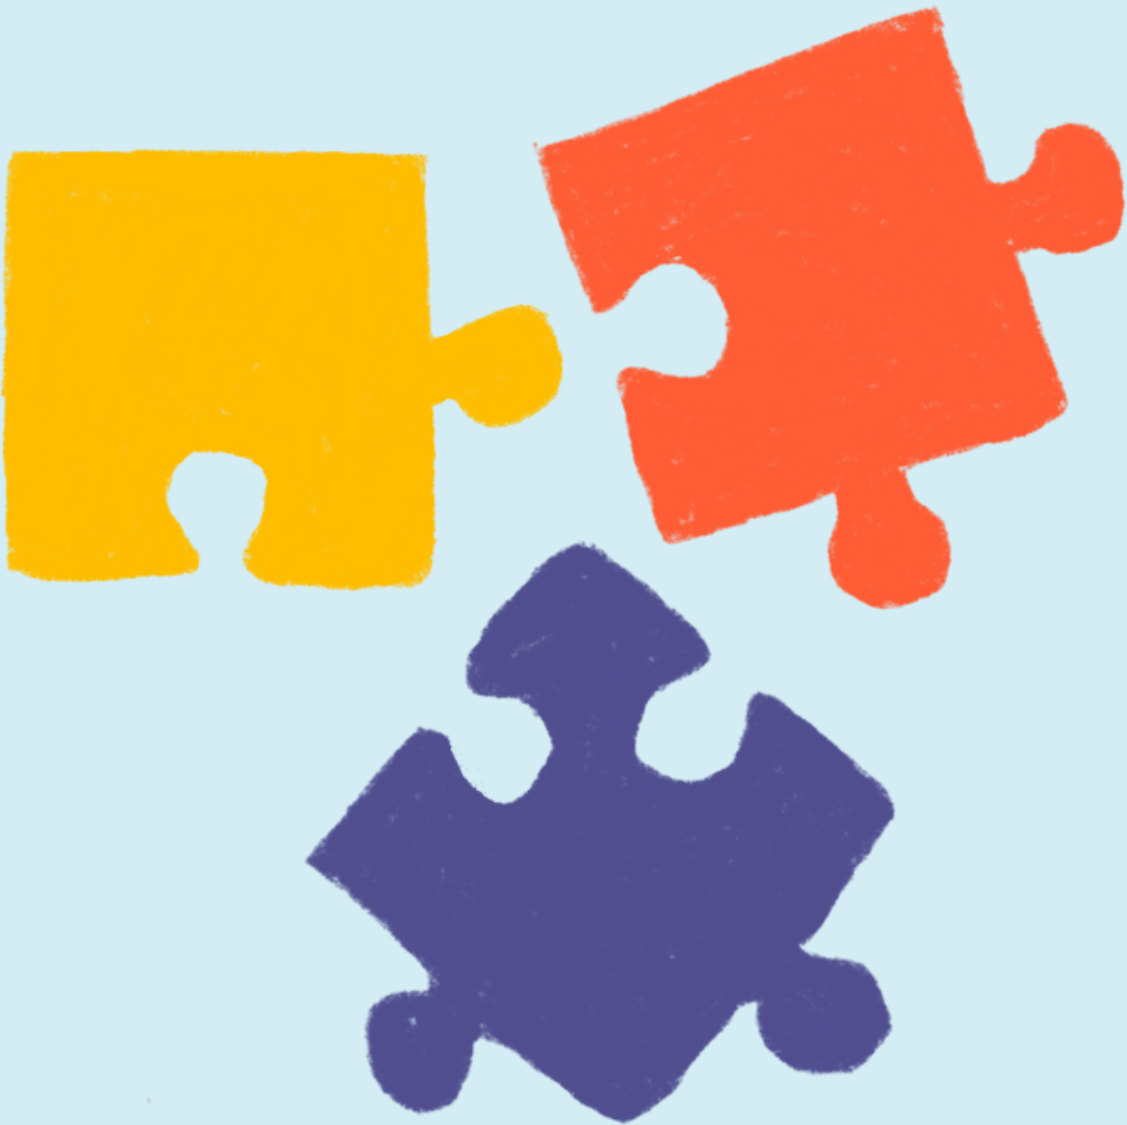

AND

SPRINGBOOT

What's The Difference?

**Imagine you're building a big
LEGO project with lots of
different pieces.**

Spring is like a special toolbox that helps you put all the LEGO pieces together in the right way to make a cool creation, like a robot or a castle.

Now, let's say you want to build something quickly without spending too much time figuring out which LEGO pieces to use.

**Spring Boot is like a magical
LEGO kit that already has some
pieces organized for you. It's
like having a box of LEGO
blocks that can magically turn
into a cool spaceship without
you having to think too much
about it.**

WHAT?

DIFFERENCE

The main difference is that Spring gives you a lot of tools to build all sorts of things using LEGO pieces, while Spring Boot gives you a special set of LEGO pieces that are already put together a bit, so you can build something awesome faster.

Awesome!

CONGRATULATIONS

Now you know the difference.
